

Link Title Maker — User Guide (v3.5.2)

What it does

Turn any Web address (URL) into a clean, clickable **word** or **emoji**. Copy the result as **HTML** (for email/docs) or **Markdown**.

Quick steps

1. **Prefix (optional):** type plain text that appears before the link (e.g., **view:**).
2. **Link text / Emoji:** type any text *or* click an emoji button.
3. **URL:** paste the full Web address (must start with **https://** or **http://**).
4. **Choose mode:**
 - **Link: text/emoji only** – only the word/emoji is clickable.
 - **Link: Prefix + text/emoji** – the entire phrase is clickable.
5. Click **Generate** → then **Copy for email/docs** (HTML) or **Copy Markdown**.

Notes

- Some chats (e.g., WhatsApp) **do not** support custom HTML links. That's a platform limitation.
- Your language preference is saved in **localStorage** (**ltm_lang**) only.
